HEMAL SAI MANYAM

CYBERSECURITY ENGINEER | SECURITY ARCHITECTURE | IAM/PAM | AI SECURITY

Munich, Germany | +49 155 6079 6480 | hemalsaimanyam5@gmail.com

LinkedIn: linkedin.com/in/hemalsai | Portfolio: hemalsai.github.io

PROFESSIONAL SUMMARY

Cybersecurity professional with enterprise experience across security architecture, IAM/PAM, security operations, AI security, network and infrastructure security, cloud/container environments, threat modelling, incident analysis and security automation. Experience at Allianz Technology supporting security assurance, Zero Trust, IAM/PAM and AI-security initiatives, and at Jio Platforms supporting large-scale identity, authentication, Linux, middleware and containerized infrastructure. M.Sc. Cybersecurity graduate with hands-on research in AI-assisted intrusion detection, adversarial machine learning and digital forensic evidence reliability.

CORE EXPERTISE

Security Engineering: Security Architecture | Zero Trust | Threat Modelling | Network Security | Infrastructure Security

IAM/PAM: OAuth 2.0 | OIDC | SAML | MFA | FIDO2 | Entra ID/PIM | CyberArk Concepts | RBAC | SSO

Detection & SOC: Wazuh | Suricata | Splunk | ELK | SIEM | Detection Engineering | Incident Analysis

AI Security: Adversarial ML | AI-assisted IDS | LLM Security | Prompt Injection | AI Threat Modelling

Cloud & Containers: Azure | AWS Fundamentals | Kubernetes | OpenShift | Docker | Podman

Automation: Python | Bash | Power Automate | REST APIs | SharePoint

PROFESSIONAL EXPERIENCE

ALLIANZ TECHNOLOGY SE | Munich, Germany

Working Student - Information Security / Security Assurance & Architecture

Mar 2025 - Mar 2026

- Supported enterprise cybersecurity initiatives across security architecture, security assurance, IAM/PAM, Zero Trust, AI security and cloud security.
- Performed threat modelling and architecture reviews for enterprise applications, cloud services, APIs and AI-enabled environments, identifying attack surfaces, trust boundaries, authentication/privilege risks and security-control gaps.
- Analysed IAM/PAM architecture patterns involving Microsoft Entra ID, Entra PIM, CyberArk concepts, MFA, RBAC, privileged-access workflows and least-privilege controls.
- Contributed to GenAI/LLM security analysis covering prompt injection, sensitive data leakage, model/output manipulation and access-control risks.
- Supported security workshops covering AI systems, IoT environments, ICS scenarios and enterprise identity architectures.
- Built cybersecurity demonstrations integrating pfSense, Suricata, Wazuh, Linux and controlled attack simulation.

RELIANCE JIO PLATFORMS LIMITED | India

Information Security / Cyber Security & Cloud

Mar 2023 - Aug 2024

- Supported enterprise cybersecurity and identity infrastructure across large-scale authentication, middleware, Linux, container and monitoring environments.

- Worked with Oracle OAM, OAA/OARM, LDAP, RADIUS, OAuth 2.0, OIDC, SAML, MFA, FIDO2, YubiKey, OTP and TOTP for enterprise authentication and access-management services.
- Supported authentication/authorization integrations and investigated access and application-connectivity incidents across identity, middleware, infrastructure and security logs.
- Worked with RHEL 8, Oracle WebLogic, OHS/WebGate, SSL/TLS and certificate-based application connectivity.
- Supported Kubernetes, OpenShift, Podman, Oracle Container Registry and JFrog environments.
- Used Splunk, ELK Stack, Grafana and Prometheus for log analysis, monitoring, troubleshooting and operational visibility.
- Supported infrastructure hardening, vulnerability remediation and secure certificate configuration.

MASTER'S THESIS & SECURITY RESEARCH

Adversarial Attacks on AI-Powered Cyber Defense Systems and Their Impact on Digital Forensics

HDBW University of Applied Sciences, Munich | 2026

- Designed and implemented an evidence-centric cyber-defence research platform investigating how adversarial attacks influence AI-assisted detection and the reliability of downstream digital forensic evidence.
- Built a multi-layer architecture integrating network telemetry, authentication behaviour, application behaviour, AI inference, SIEM correlation and forensic evidence preservation.
- Developed Python-based security analytics using pandas, scikit-learn, Random Forest, XGBoost and Isolation Forest.
- Integrated AI-generated predictions with Wazuh through agent-based log collection and custom detection rules.
- Configured Suricata IDS for network monitoring and pfSense for routing, NAT and stateful firewall enforcement.
- Preserved raw logs, AI inference outputs, confidence scores, correlated SIEM alerts and ground-truth execution records for post-incident validation.
- Simulated reconnaissance, port scanning, authentication anomalies, failed-login bursts, application attacks, prompt injection and multi-stage attack behaviour.

TECHNICAL SKILLS

Security / SOC: Wazuh SIEM | Suricata IDS | Splunk | ELK Stack | pfSense | Wireshark | Nessus | Nmap | MISP | Grafana | Prometheus

IAM / PAM: Oracle OAM | OAA/OARM | Entra ID | Entra PIM | CyberArk Concepts | LDAP | RADIUS | OAuth 2.0 | OIDC | SAML | MFA | FIDO2 | YubiKey | RBAC | SSO

AI / ML: Python | pandas | scikit-learn | Random Forest | XGBoost | Isolation Forest | Anomaly Detection | Feature Engineering | Behavioral Analysis

AI Security: Adversarial ML | Prompt Injection | Data Poisoning | Evasion | AI Threat Modelling | LLM Security | Explainable/Trustworthy AI | AI-assisted IDS

Network / Infrastructure: TCP/IP | DNS | DHCP | Routing | NAT | VLANs | Network Segmentation | Stateful Firewalls | iptables | SSH | TLS/SSL

Cloud / Containers: Microsoft Azure | AWS Fundamentals | Kubernetes | OpenShift | Docker | Podman | JFrog

Systems: RHEL 8 | Ubuntu | Kali Linux | Windows | VMware Workstation Pro | GNS3

Security Frameworks: STRIDE | PASTA | NIST CSF | ISO 27001/27005 | MITRE ATT&CK | OWASP | Zero Trust | Defence-in-Depth

EDUCATION

Master of Science (M.Sc.) - Cybersecurity

HDBW University of Applied Sciences | Munich, Germany | 2026
